HANDLEBAR & SADDLE ADJUSTABLE
Moves upward and downward with an inclination that allows right alignment for different users height.

RESISTANCE
Determined by two polygonal profiles under the pedals, designed to give continuous and constant resistance when pedaling. Resistance can also be improved increasing the pedaling speed.

LIGHT BUT VERY STABLE
The Aquabike is very light - only 19kg - but is very stable in water thanks to a large and robust stainless steel structure. The wheels on the front base of the bike make it very easy to put in and take out of the pool and move it on the pool deck.
